

Ahoy there Drew Valentine,

It has taken all this time for me to find five minutes to help you out. Yes, I am now a beach wheels evangelist.

As a composite boat builder what you see here is my solution to single handily address brining my rowing pulling skiff up the ramp.

What is more I wanted my rig to travel in the bow of the hull and to be mounted quickly when I wanted to beach the hull.

Oh and by the way the lightweight cradle to which the beach wheels is carbon fibber, support light weight closed cell and then flow-coated.

If you should like to use these images on your web site and/or on YouTube then let's communicate via mail or mobile

All the best

Michael Edols
